

# TL2652 Feedthrough Filter

Current Ratings: 20 Amps  
 Operating Voltage: 230VAC / 350VDC (TL2652)

This single line, high performance feed-through filter provides excellent EMI/RFI protection. Offering high attenuation. This is an economical alternative to dedicated filter units, where multiple input or output power lines require suppression.

Image may not be necessarily true  
 Representative to TL265- range

## TYPICAL APPLICATIONS

- Screened rooms.
- High frequency welding equipment.
- Power supplies.
- Telecom systems.
- Medical Applications.
- Military.

## ELECTRICAL SPECIFICATIONS

- Rated voltage ( $V_R$ ): 230VAC 50/60Hz
- Rated current ( $I_R$ ): referred to 40°C
- Insertion Loss (dB.): see table
- Climatic category: GPC (40/085/56);
- Temperature range: -20°C to +70°C

## MECHANICAL SPECIFICATIONS

Manufacture: brass case and stud that is tin plated; Metric stud, nut, and washers (TL2652)

**Connections:** Metric M5 full nuts, spring washers, plain flat washers and threaded M5 bar.

Note: on screwing the cable to the filter, the lock nut must be held in position to avoid a torque to the threaded bar inside the filter.

## TECHNICAL ADVANTAGES

Current rating 20A.  
 Excellent attenuation up-to 1GHz.  
 Rugged resin sealed construction.  
 Flange-mounting.

## TECHNICAL SPECIFICATIONS

Part no.	In (A)	VAC/VDC	Cp (uF)	Temperature Range C
TL2652	20	230/350	0.05	-20 - +70
